Option #4 \$22.50 per acre 1 type fungicide mostly preventative that is 6 oz Qaudris or 10 oz Stratego + air application

Option #5 \$26.25 per acre 10.5 oz Quilt Xcel (high rate preventative +curative)

Option#6 \$27.25 per acre 9 oz headline amp (high rate preventative + curative)

We believe the most effective way to manage fungicide application is look at where it fits best on your acres and hybrids. To do this we need to consider Hybrids, Crop rotation, and tillage to provide the best chance of success for fungicides.

With this program we will help you choose these fields, and get the maps together now for the applicators. The window of application on corn is generally as when the field is in full tassel. We have several products to fit your field needs and can add insecticides, as you need them for Japanese beetles and corn rootworm beetles.
